

My notes

Assumptions

I made a few assumptions along the way: different needs among different advisors, different roles, purchase cycles & ultimately different products.

A is the only one where pain → buyer → price → workflow → “pay now” all line up for a shippable wedge (**C** & **J** echoed this need).

- **B / D / F** — not licensed wealth advisors (different buyer, different product).
- **E / I** — book transitions / succession projects (high \$, infrequent, home-office buyers).
- **G / C / H** enterprise angle — content, compliance, or firm-wide intel (long sales cycle, advisor can't buy alone).

Tradeoff I'm accepting: narrow wedge now; broaden later only if A-like buyers pay.

Wrong customer

Some interviews weren't independent wealth advisors at all — CFO reporting, bank ops, tech brokerage. Good problems, different company. Building for them means abandoning the Rowan advisor thesis.

Right world, wrong shape

Book transitions and succession can be big money — but they're rare projects. Home office often buys (or blocks). That's consulting, not a tool someone buys this month and uses every Monday.

Real pain, advisor can't buy

Content, compliance, firm-wide intel — advisors want it, but marketing or the bank owns budget and approval. Year-long sales cycle. I'm not starting a founding wedge there.

Which Rowan themes this product tackles

Mainly these two:

- **Surfacing compliant growth opportunities** — core job. Rank dormant prospects, say why call them, give a talk track, help turn a cold book into meetings.
- **Keeping the advisor in control** — you never auto-email or auto-dial. Human picks, calls, logs, exports. AI recommends; advisor decides.

Partially / lightly:

- **Catching follow-through that would otherwise be missed** — only in a narrow sense: a ranked weekly list + outcome log so names don't die in a spreadsheet. Not full meeting→commitment tracking.

Mostly not this product:

- Detecting meaningful changes across clients/prospects (ongoing alerts)
- Moving work safely between people and systems

- Preparing forms, records, and follow-up correctly
-

2. What I built (2 min talk + 3–4 min live)

Reactivation Desk — export a messy CSV → finishable weekly call list → polished call tips → log outcomes → next week.

Live path (use the desk):

1. Unlock (Sprint / Unlimited or promo).
2. Import a book → AI guesses who you sell to / what you reopen → user corroborates (not Advisor-A-only chips).
3. Build a short week (budget you can finish).
4. Open a name → call polish grounded in the file (+ light public context).
5. Wrap → leftovers / next week.

Why it's sellable now: completes one workflow end-to-end with a real input (CSV), no CRM integration, priced as Sprint (\$499) or Unlimited (\$99/mo) against A's proven reactivation math and failed setter spend.

3. Questions for them (close)

1. For Advisor A-like buyers, is Sprint vs monthly the right packaging — or should the first SKU be a done-with-you “first week” service?
2. Where's the line on public web enrichment vs compliance comfort for broker-dealer affiliated advisors?
3. If this works, what's the next wedge you'd want: deeper call coaching, CSA workflow, or book-of-business import beyond CSV?
4. Who should we put this in front of first — independents like A, or mutual-company advisors like C with heavier compliance?
5. What would make this a clear “no” in diligence — accuracy, hallucination risk, or “they won't upload the book”?
